Indian Beans Payment Links

Everything you need to start accepting payments from your customers — fully branded, secure, and ready to use.

Welcome

Your Indian Beans payment system is live. Share a link with any customer; they pay by card on your branded checkout page; funds settle to your bank account; you get an email the moment it's paid. This guide covers your 5 pre-configured subscription links and how to use them.

Your 5 Subscription Links

Five subscription tiers are ready to share. Each link bills the customer monthly until they cancel. Just copy the URL and send it to the customer.

Plan	Price	Share this URL
TIER 01 **beanssub01**	**$0.79** CAD / month	`https://indianbeans.com/l/beanssub01`
TIER 02 **beanssub02**	**$0.89** CAD / month	`https://indianbeans.com/l/beanssub02`
TIER 03 **beanssub03**	**$1.09** CAD / month	`https://indianbeans.com/l/beanssub03`
TIER 04 **beanssub04**	**$1.29** CAD / month	`https://indianbeans.com/l/beanssub04`
TIER 05 **beanssub05**	**$1.99** CAD / month	`https://indianbeans.com/l/beanssub05`

> **Tip:** Each link is permanent — unlimited customers can subscribe to the same URL. The subscription recurs automatically every month on the same date the customer signed up, until they cancel.

Three ways to share a link with a customer

Option 1 · Email

Paste the URL into an email. Our Mail app automatically turns it into a clickable link. Customer clicks → pay page opens → they enter card → done.

Option 2 · WhatsApp / SMS

Send the URL in a chat. On mobile, the link opens directly in the phone's browser.

Option 3 · QR Code

Generate a QR code of the URL (free: `qr-code-generator.com` or built into most POS printers). Print it and display at your counter. Customer scans with their phone camera → pay page opens → done.

What the customer sees

1. They open your Indian Beans checkout page (gold banner, your logo at the top).
2. They see the plan name, price, and "Then $X.XX every month" subscription schedule.
3. They type their email + name, accept your Terms, and click **Pay with card**.
4. Card entry appears — they type card number, expiry, CVV, postal code.
5. Payment confirmed. They see a thank-you message. The receipt is emailed to them immediately.
6. The subscription is active. Their card will be charged automatically every month until they cancel.

> **Secure by design:** Card details are entered directly into our payment processor's secure form — they never touch Indian Beans servers. We're PCI-compliant through our processor.

Logging into your dashboard

Visit `https://indianbeans.com/partner/login`

Email	bean01@indianbeans.com
Password	Bean@2026

> **Change your password after first login.** Go to the user menu (top-right) → Change Password. Pick something only you know.

Tracking your payments

Once logged in, you can see every payment that comes through:

Dashboard · Overview of today's revenue

Left sidebar → **Dashboard**. Shows today's income, this week's income, and recent transactions at a glance.

Invoices · Detailed payment history

Left sidebar → **Invoices**. Lists every invoice generated by every payment link, with:

- Invoice number (e.g. `INV-2026-0005`)
- Customer name + email
- Amount + currency
- Status: PAID, SENT, or REFUNDED
- Date paid

Click any invoice to see the full detail + download a PDF receipt.

Payment Links · Manage your 5 subscription links (plus new ones)

Left sidebar → **Payment Links**. See your 5 subscription links. Click any to see:

- How many times it's been used
- Total revenue from that link
- Current subscribers
- The shareable URL (copy with one click)

Creating a new payment link

Not just subscriptions — you can create **one-time payment links** for individual orders too (e.g. "pay for your custom coffee bean order"). Here's how:

1. Dashboard → **Payment Links** → **Create New Link** button
2. Fill in:
   - **Link name** — for your records only (customers don't see this)
   - **Mode** — `one-time` or `subscription`
   - **If subscription**: pick an interval (`monthly`, `yearly`, etc.)
   - **Price** + **currency**
   - **Short URL slug** — customize the end of the link (e.g. `deluxe-blend` → `indianbeans.com/l/deluxe-blend`). Must be unique.
3. Save → copy the generated URL → share it anywhere.

Refunding a payment

1. Invoices → click the paid invoice
2. **Refund** button (top-right)
3. Full refund or partial — enter the amount
4. Confirm. Customer sees the refund on their statement within 5–10 business days.

Cancelling a subscription

If a customer asks you to cancel their subscription:

1. Invoices → find any paid invoice from that customer
2. Open it → **Cancel Subscription** button
3. Confirm. The customer will **not** be billed on the next cycle. All past payments remain.

Settings you can change

Dashboard → **Settings** → sections you can edit:

Section	What you can change
Business Information	Business name, contact email, phone, website, warehouse address
Billing & Tax	Default tax rate, tax label (e.g. GST 18%)
Terms & Conditions	The T&C text customers must accept at checkout. Click **Terms** in the sidebar to publish a new version.
Payment processor	Stripe or Helcim keys (if you ever switch processors)

Email notifications you'll get

- **New payment received** — emailed to `bean01@indianbeans.com` within seconds of each successful payment
- **Payment failed** — emailed if a subscription renewal fails (card declined, insufficient funds, etc.)
- **Refund issued** — confirmation whenever you refund
- **Subscription cancelled** — when either you or the customer cancels

Testing before you go live

Use **Stripe test cards** to make test payments without charging real money. The tenant is currently on **test mode**.

Scenario	Card Number	Expiry / CVV
Successful payment	`4242 4242 4242 4242`	Any future date / Any 3 digits
Declined	`4000 0000 0000 0002`	Any future date / Any 3 digits
Insufficient funds	`4000 0000 0000 9995`	Any future date / Any 3 digits
CVV check fails	`4000 0000 0000 0101`	Any future date / Any 3 digits

> **Before taking real payments:** switch from Stripe test keys to live keys in **Settings** → **Payment processor**. Once switched, every charge is real money. Confirm with support before going live.

Troubleshooting

If this happens…	Try this
Customer says "page didn't load"	Check the URL has no typos. Each link is case-sensitive. Try opening it yourself in an incognito tab.
"Awaiting payment" never changes to "Paid"	Payment can take up to 30 seconds to settle. If still "Awaiting" after 2 minutes, check the invoice detail — it will show the exact error.
Customer says card was declined	Normal. Ask them to try a different card or contact their bank. The invoice stays "Sent" so they can retry on the same link.

Can't log in to the dashboard	Make sure you're using `indianbeans.com/partner/login` (not `/signin`, that's for a different app). Password is case-sensitive.

Need help?

Email `hello@indianbeans.com` for support. Include:

- Your business name (Bean 01)
- The invoice number if your question is about a specific payment
- A screenshot if it's a UI issue

Usually a reply within one business day.

> **You're all set.** Share your first payment link, make your first sale, and welcome to Indian Beans Payments.
